```
buttonElement.classList.add('is-subscribed');
```

this method adds a new class named as "js-subscribed" when we click on the button

The line of code you provided is written in JavaScript and it adds a CSS class "is-subscribed" to the classList of a DOM (Document Object Model) element referred to as "buttonElement".

This line of code is commonly used in web development to dynamically modify the styling or behavior of an HTML element. In this case, it suggests that when executed, the element with the class "is-subscribed" will likely receive specific styling or functionality defined in a CSS stylesheet or JavaScript code.
